

Si 6303/Si 6304/Si 6305

Engineering
GREAT Solutions

**Process and steam safety valves
to PED and DIN/EN standards**

Si 6303 / Si 6304 / Si 6305

Features

The proven quality IMI Bopp & Reuther high-pressure safety valve:

- > A reliable design with solid inlet nozzle, screwed in and welded
- > Available in material designs for high as well as low temperatures
- > With a great variety of sizes and options

Inlet sizes

DN 25 to DN 400

Inlet pressure rating

PN 10 to PN 400

Set pressures

0.45 bar g to 250 bar g

Temperature range

-270 °C to + 550 °C

Overpressure

Vapours / gases	5%
Liquids	10%

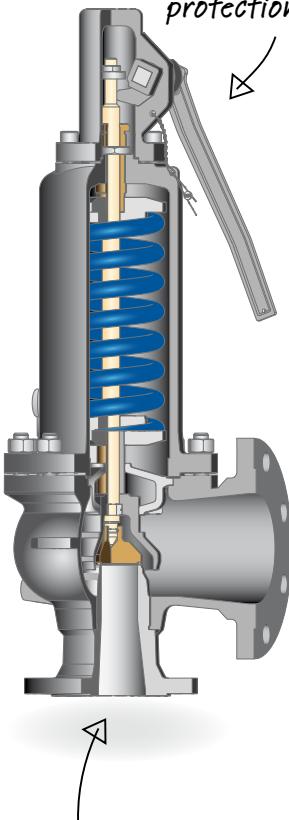

Blow down

Vapours / gases	10%
Liquids	20%

Allowable built-up back pressure

15% of the set pressure

Engineered for
high pressure
protection

Applications

- > For vapours, gases and liquids
- > Protection of system components
- > Steam boiler
- > Air separator
- > Power plants and industrial steam generation
- > Paper factories
- > High-pressure chemical processes

Full nozzle design

Approvals and standards

EC type examination

- Pressure Equipment Directive 97/23/EC
- DIN EN ISO 4126-1
- AD 2000-Merkblatt A2
- VdTÜV Merkblatt "Sicherheitsventil 100"

VdTÜV type approval acc. to

TÜV.SV.12 -1134.d₀.D/G/F.α_w.p

TÜV.SV.13 -701.d₀.F.α_w.p

IMI Bopp & Reuther will not renew the existing VdTÜV type approvals. The requirements by VdTÜV and applicable standards are completely considered by the EC type examination.

The design, manufacture, testing and labelling meet the requirements of DIN EN ISO 4126-7, DIN EN 12266-1/-2 (insofar as applicable to safety valves), DIN EN 1092 parts I and II Flanges, AD 2000-Merkblatt A4, AD 2000-Merkblatt HPO, technical rules for steam boiler TRD 110, TRD 421

Si 6303 / Si 6304 / Si 6305

Type code

Please state ►

Si 6104 AB 00 .22a .60

Set pressure	38 bar g
Fluid temp.	360 °C
Fluid and State	Superheated steam, Steam
Inlet	DN 100, weld end
Weld end dimensions ¹⁾	117 x 5.6 mm
Outlet	DN 150, PN 40, B1
Flow diameter	63 mm
Approval	97/23/EG (CE)

²⁾ The standard materials of the material codes can be changed by selecting trim codes. Please see brochure "IMI Bopp & Reuther High Flow Safety Valves", page 44 for information on the trim codes T1, T2, T3.

Si 6303 / Si 6304 / Si 6305

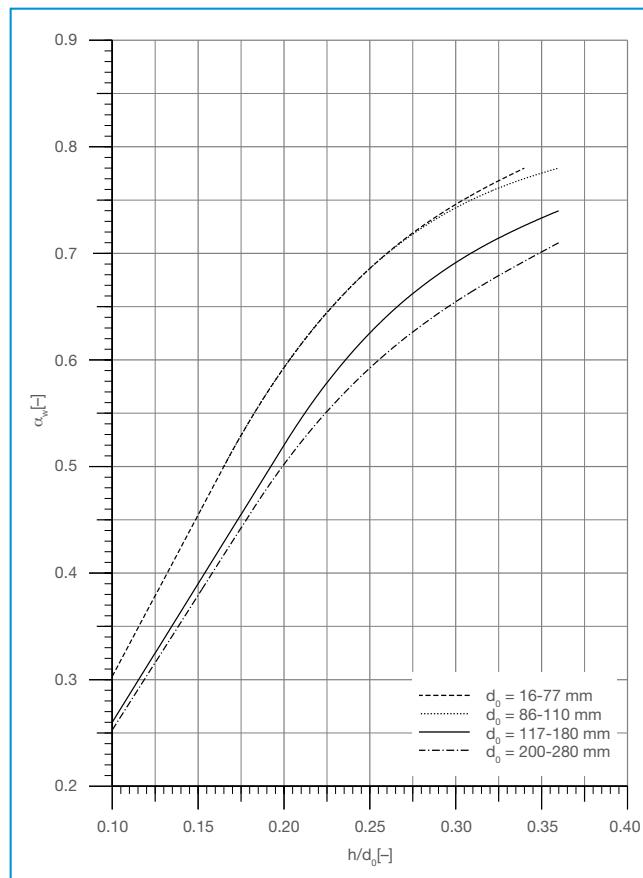

Coefficients of discharge

Fluid group	Inlet size	Flow diameter	$h/d_0 \geq$	$p_b/p_0 \leq$	α_w
Vapours / gases (D / G)	DN 25 to DN 150	16 mm to 77 mm	0.34	0.25	0.78
	DN 125 to DN 200	86 mm to 110 mm	0.36	0.25	0.78
	DN 200 to DN 300	117 mm to 180 mm	0.36	0.3	0.74
	DN 300 to DN 400	200 mm to 280 mm	0.36	0.3	0.71
Liquids (F)	DN 25 to DN 100	16 mm to 70 mm	0.34	-	0.6
	DN 100 to DN 150	77 mm	0.36	-	0.6
	DN 125 to DN 200	86 mm to 125 mm	0.36	-	0.52

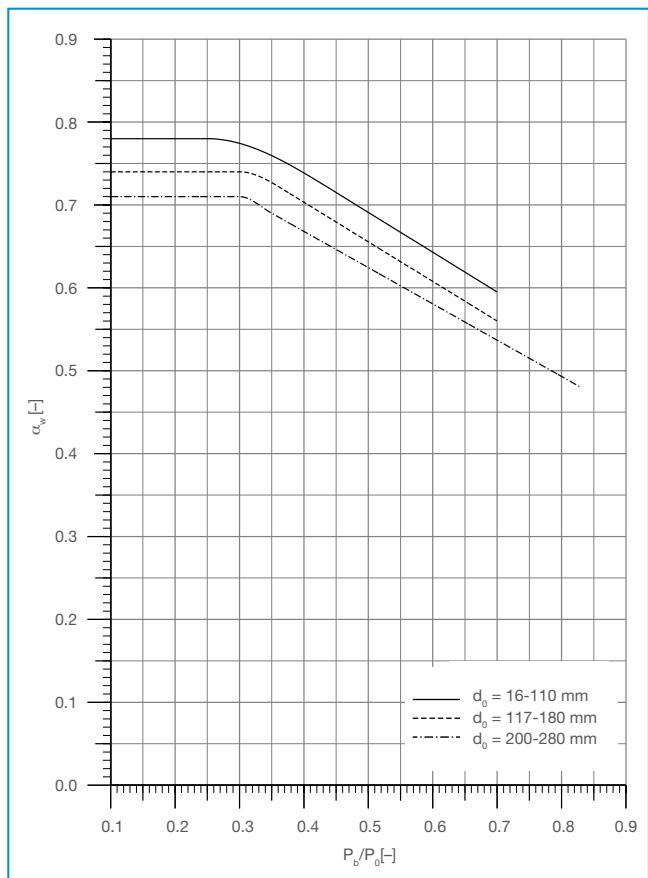

The coefficient of discharge for gases/vapours in a pressure ratio of $p_b/p_0 > 0.25$ and/or $p_b/p_0 > 0.3$ is shown in the diagram below.

The capacity of the selected safety valves can be adjusted to the required capacity by reducing the lift, thus reducing undesirable extra performance. The following applies:

$\alpha_{w(\text{reduced})} = \alpha_w \times q_m/q_{mc}$. The required ratio h/d_0 is shown in the diagram below, and the reduced lift calculated with $h_{(\text{reduced})} = d_0 \times (h/d_0)$.

Si 6303 / Si 6304 / Si 6305 coefficient of discharge α_w depending on h/d_0 for gases and vapours

Si 6303 / Si 6304 / Si 6305 coefficient of discharge α_w depending on p_b/p_0 for gases and vapours

Si 6303 / Si 6304 / Si 6305

Sample size calculation for a safety valve in liquid service acc. to DIN EN ISO 4126-7:

Fluid	As the viscosity is negligible in this example, $K_v = 1.0$ can be used in the calculation.
oil	
Density	
700 kg/m ³	$A = \frac{q_m}{1.61 K_{dr} k_v \sqrt{\frac{v}{p_0 - p_b}}}$, is the required flow area.
Temperature T₀	The specific volume v = 1/density = 0.0014285
56 °C = 329 K	
Set pressure	
48.0 bar g	$A = \frac{51000}{1.61 \times 0.6 \times 1.0 \sqrt{\frac{0.0014285}{53.8 - 15}}} = 320.35 \text{ mm}^2$
Relieving pressure p₀ at 10% accumulation	With a flow area of $A_0 = 491 \text{ mm}^2$, the safety valve Si 6303 G 00, DN 40 x 50, PN 63 x 16, d ₀ 25.0 mm is suitable for this application (see page 8 for the size range). The certified capacity q _{mc} can be established as 78.146.9 kg/hr from above equation. The lift can be restricted to reduce the undesirable extra performance (q_{mc}/q_m) of 53%. $\alpha_{w(reduced)} = \alpha_w \times q_m/q_{mc} = 0.6 \times 51.000/78.146.9 = 0.39$. The ratio h/d ₀ can be derived from the diagram as 0.18, which makes the restricted lift h = 0.18 x 25 = 4.5 mm.
(48 x 1.1) + 1 = 53.8 bar a	
Back pressure p_b	
15 bar a	
Required capacity q_m	
51.000 kg/hr	

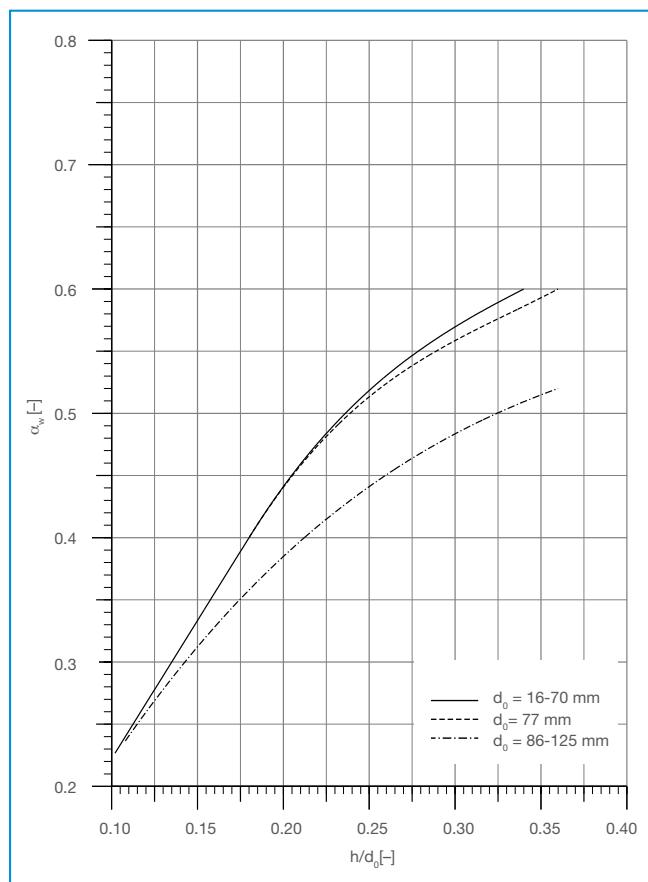

For rather small sizes, the coefficient of discharge $K_{dr} = 0.6$ can be derived from the table on page 4 for liquids.

$$A = \frac{q_m}{1.61 K_{dr} k_v \sqrt{\frac{v}{p_0 - p_b}}}$$

The specific volume v = 1/density = 0.0014285

$$A = \frac{51000}{1.61 \times 0.6 \times 1.0 \sqrt{\frac{0.0014285}{53.8 - 15}}} = 320.35 \text{ mm}^2$$

With a flow area of $A_0 = 491 \text{ mm}^2$, the safety valve Si 6303 G 00, DN 40 x 50, PN 63 x 16, d₀ 25.0 mm is suitable for this application (see page 8 for the size range). The certified capacity q_{mc} can be established as 78.146.9 kg/hr from above equation. The lift can be restricted to reduce the undesirable extra performance (q_{mc}/q_m) of 53%. $\alpha_{w(reduced)} = \alpha_w \times q_m/q_{mc} = 0.6 \times 51.000/78.146.9 = 0.39$. The ratio h/d₀ can be derived from the diagram as 0.18, which makes the restricted lift h = 0.18 x 25 = 4.5 mm.

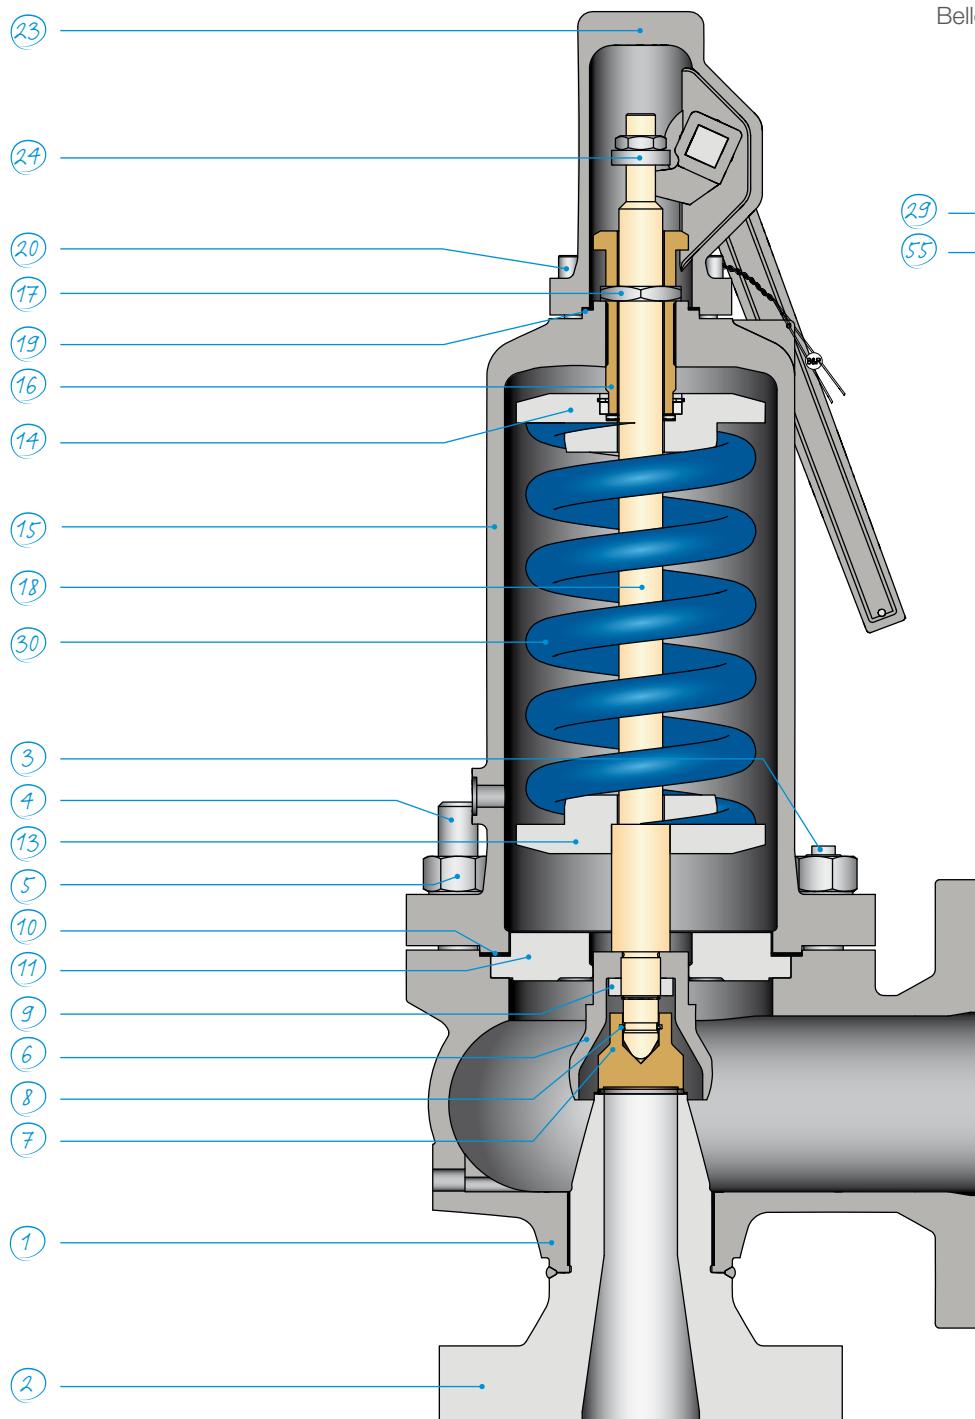

The coefficients of discharge K_{dr} acc. to DIN EN ISO 4126-1 in this series are identical with above coefficients of discharge α_w and the values in the diagrams.

- h = Lift [mm]
- d₀ = Flow diameter of the selected safety valve [mm]
- h/d₀ = Lift/Flow diameter ratio
- p_b = Absolute back pressure [bar a]
- p₀ = Absolute relieving pressure [bar a]
- p_b/p₀ = Absolute back pressure/absolute relieving pressure ratio
- α_w = Coefficient of discharge acc. to AD 2000-Merkblatt A2
- q_m = Required mass flow [kg/hr]
- q_{mc} = Certified mass flow [kg/hr]

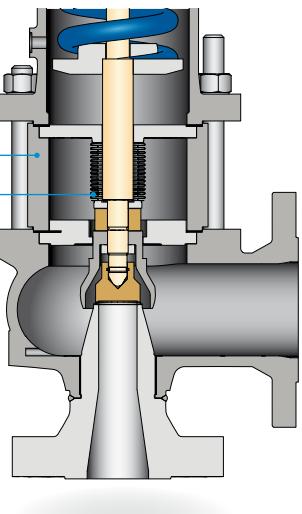

The safety valve type Si 6x13/Si 6x14/Si 6x15 is designed for liquid service with the specific requirement of a "proportional opening characteristic". This specification is certified by a particular EC approval. With the lift/flow diameter ratio of h/d₀ > 0.16; the corresponding coefficient of discharge is α_w 0.36.

¹⁾ Material may be used in temperatures down to -85 °C if the specification of AD 2000-Merkblatt W10 is complied with.

²⁾ Material may be used in temperatures down to -273 °C if the specification of AD 2000-Merkblatt W10 is complied with.

³⁾ Packed lifting lever (cap) from DN 50 x 80 flanged

⁴⁾ Design Si 61 with open bonnet only for valves acc. to material code „00“ and „01“.

⁵⁾ Bonnet in GP240GH/1.0619 for valves Si 61 with open bonnet, Si 64 with bellows or with design option .15.

⁶⁾ Si 63 type valves with closed bonnet with design option .15 above 400 °C.

⁷⁾ Inlet nozzle up to seat ø 77 mm and with weld end option .22a is always manufactured in forging, flow diameter ø 93 mm and above in casting

⁸⁾ The spring material selection depends on the valve size and set pressure as well as the temperature.

Other spring materials are available for special operating conditions, e.g. temperatures > 400 °C or < -170 °C, and if the customer specifies this.

⁹⁾ Intermediate cover for valves acc. to material code 00 and 01 up to DN 125 x 200 made from 1.4122, above this made from 1.4408.

Spare Parts:

*1 For start-up

*2 For 2 years of operation

*3 After several years of operation

All safety valves in pressure class 5 are equipped with a needle bearing between the adjusting screw and upper spring washer.

IMI Bopp & Reuther reserve the right to technical changes or application of higher quality materials without prior notice. The material design can be tailored to customer specifications at any time upon request.

²⁾ Material may be used in temperatures down to -273 °C if the specification of AD 2000-Merkblatt W10 is complied with.

³⁾ Packed lifting lever (cap) from DN 50 x 80 flanged Si 61 design with open bonnet only for valves acc. to material code "00" and "01".

⁴⁾ Bonnet in GP240GH/1.0619 for valves with open bonnet Si 61, Si 64 with bellows or with design option .15.

⁵⁾ Si 63 type valves with closed bonnet with design option .15 above 400 °C.

⁷⁾ Inlet nozzle up to seat ø 77 mm and with weld end always in forged steel, flow diameter ø 93 mm and above in cast steel.

⁸⁾ The spring material selection depends on the valve size and set pressure as well as the temperature.
Other spring materials are available for special operating conditions, e.g. temperatures > 400 °C or < -170 °C, and if the customer specifies this.

⁹⁾ Intermediate cover for valves acc. to material code 00 and 01 up to DN 125 x 200 made from 1.4122, above this made from 1.4408.

Spare Parts:

*1 For start-up

*2 For 2 years of operation

*3 After several years of operation

All safety valves in pressure class 5 are equipped with a needle bearing between the adjusting screw and upper spring washer.

IMI Bopp & Reuther reserve the right to technical changes or application of higher quality materials without prior notice. The material design can be tailored to customer specifications at any time upon request.

Si 6504

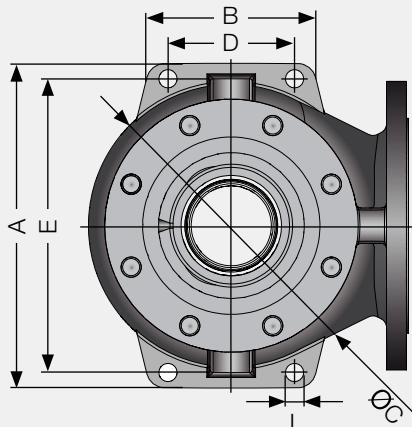

Dimensions in mm

The height from the inlet to the lower edge of the support bracket is identical with the centre to face dimension S2.

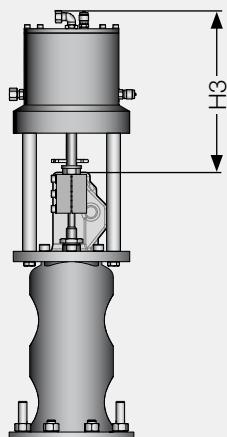

Support brackets will only be drilled if specified by the customer.

The bonnet for bellows seal design is provided with the test connection K. K up to DN 50 x 80 – G1/4", above G3/8".

¹⁾ Material may be used in temperatures down to -85 °C if the specification of AD 2000-Merkblatt W10 is complied with.

²⁾ Packed lifting lever (cap) from DN 50 x 80 flanged

³⁾ Bonnet in GP240GH / 1.0619 for valves with open bonnet Si 61, with bellows Si 64 or with design option .15.

⁴⁾ Si 63 type valves with closed bonnet require design option .15 above 400 °C.

⁵⁾ Inlet nozzle up to seat ø 77 mm and with weld end option .22a is always manufactured in forging, flow diameter ø 93 mm and above in casting.

⁶⁾ The spring material selection depends on the valve size and set pressure as well as the temperature.

Other spring materials are available for special operating conditions, e.g. temperatures > 400 °C or < -170 °C, and if the customer specifies this.

⁷⁾ Intermediate cover for valves acc. to material code 00 and 01 up to DN 125 x 200 from 1.4122, above this from 1.4408.

Spare Parts:

*1 For start-up

*2 For 2 years of operation

*3 After several years of operation

All safety valves in pressure class 5 are equipped with a needle bearing between the adjusting screw and upper spring washer.

IMI Bopp & Reuther reserve the right to technical changes or application of higher quality materials without prior notice. The material design can be tailored to customer specifications at any time upon request.
